Martin Gardner's Science Magic: Tricks and Puzzles (Dover Magic Books)

By Martin Gardner

Make an eggshell turn a somersault, spin a coin so that it lands on "heads," teach a bear to climb a string, and perform other acts of scientific wizardry! Martin Gardner, the master of mathematical puzzles, shares more than 80 of his finest magic tricks, teaching children and adults the scientific properties behind water, air, fire, heat, motion, gravity, inertia, friction, electricity, magnetism, sound, and light.

Fun and fascinating, the simple maneuvers require only basic everyday props, and those requiring matches, knives, boiling water, and other tricky items are marked with a symbol that lets kids know they'll need assistance from an adult. Helpful drawings illustrate each stunt.

Editorial Review

About the Author

Martin Gardner was a renowned author who published over 70 books on subjects from science and math to poetry and religion. He also had a lifelong passion for magic tricks and puzzles. Well known for his mathematical games column in *Scientific American* and his "Trick of the Month" in *Physics Teacher* magazine, Gardner attracted a loyal following with his intelligence, wit, and imagination.

Martin Gardner: A Remembrance

The worldwide mathematical community was saddened by the death of Martin Gardner on May 22, 2010. Martin was 95 years old when he died, and had written 70 or 80 books during his long lifetime as an author. Martin's first Dover books were published in 1956 and 1957: *Mathematics, Magic and Mystery*, one of the first popular books on the intellectual excitement of mathematics to reach a wide audience, and *Fads and Fallacies in the Name of Science*, certainly one of the first popular books to cast a devastatingly skeptical eye on the claims of pseudoscience and the many guises in which the modern world has given rise to it. Both of these pioneering books are still in print with Dover today along with more than a dozen other titles of Martin's books. They run the gamut from his elementary *Codes, Ciphers and Secret Writing*, which has been enjoyed by generations of younger readers since the 1980s, to the more demanding *The New Ambidextrous Universe: Symmetry and Asymmetry from Mirror Reflections to Superstrings*, which Dover published in its final revised form in 2005.

To those of us who have been associated with Dover for a long time, however, Martin was more than an author, albeit a remarkably popular and successful one. As a member of the small group of long-time advisors and consultants, which included NYU's Morris Kline in mathematics, Harvard's I. Bernard Cohen in the history of science, and MIT's J. P. Den Hartog in engineering, Martin's advice and editorial suggestions in the formative 1950s helped to define the Dover publishing program and give it the point of view which — despite many changes, new directions, and the consequences of evolution — continues to be operative today.

In the Author's Own Words:

"Politicians, real-estate agents, used-car salesmen, and advertising copy-writers are expected to stretch facts in self-serving directions, but scientists who falsify their results are regarded by their peers as committing an inexcusable crime. Yet the sad fact is that the history of science swarms with cases of outright fakery and instances of scientists who unconsciously distorted their work by seeing it through lenses of passionately held beliefs."

"A surprising proportion of mathematicians are accomplished musicians. Is it because music and mathematics share patterns that are beautiful?" — Martin Gardner

Users Review

From reader reviews:

Lee Durfee:

Nowadays reading books be than want or need but also turn into a life style. This reading routine give you lot of advantages. Associate programs you got of course the knowledge even the information inside the book which improve your knowledge and information. The info you get based on what kind of guide you read, if you want have more knowledge just go with training books but if you want really feel happy read one having theme for entertaining for example comic or novel. The actual Martin Gardner's Science Magic: Tricks and Puzzles (Dover Magic Books) is kind of reserve which is giving the reader erratic experience.

Richard Martinez:

People live in this new morning of lifestyle always try and and must have the spare time or they will get large amount of stress from both daily life and work. So , when we ask do people have time, we will say absolutely sure. People is human not only a robot. Then we ask again, what kind of activity have you got when the spare time coming to a person of course your answer will unlimited right. Then do you ever try this one, reading publications. It can be your alternative inside spending your spare time, often the book you have read is Martin Gardner's Science Magic: Tricks and Puzzles (Dover Magic Books).

Ronald Stauffer:

That book can make you to feel relax. This particular book Martin Gardner's Science Magic: Tricks and Puzzles (Dover Magic Books) was multi-colored and of course has pictures on the website. As we know that book Martin Gardner's Science Magic: Tricks and Puzzles (Dover Magic Books) has many kinds or genre. Start from kids until adolescents. For example Naruto or Investigation company Conan you can read and believe that you are the character on there. Therefore not at all of book are make you bored, any it can make you feel happy, fun and loosen up. Try to choose the best book for you and try to like reading that will.

John Dame:

As a university student exactly feel bored in order to reading. If their teacher inquired them to go to the library or to make summary for some book, they are complained. Just tiny students that has reading's heart and soul or real their hobby. They just do what the trainer want, like asked to go to the library. They go to at this time there but nothing reading very seriously. Any students feel that reading is not important, boring and also can't see colorful pictures on there. Yeah, it is to be complicated. Book is very important for you personally. As we know that on this period, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. Therefore , this Martin Gardner's Science Magic: Tricks and Puzzles (Dover Magic Books) can make you sense more interested to read.
