## Separation and Purification Technologies in Biorefineries From Brand: Wiley

Separation and purification processes play a critical role in biorefineries and their optimal selection, design and operation to maximise product yields and improve overall process efficiency. Separations and purifications are necessary for upstream processes as well as in maximising and improving product recovery in downstream processes. These processes account for a significant fraction of the total capital and operating costs and also are highly energy intensive. Consequently, a better understanding of separation and purification processes, current and possible alternative and novel advanced methods is essential for achieving the overall techno-economic feasibility and commercial success of sustainable biorefineries.

This book presents a comprehensive overview focused specifically on the present state, future challenges and opportunities for separation and purification methods and technologies in biorefineries.

Topics covered include:

**Equilibrium Separations:** Distillation, liquid-liquid extraction and supercritical fluid extraction.

**Affinity-Based Separations:** Adsorption, ion exchange, and simulated moving bed technologies.

**Membrane Based Separations:** Microfiltration, ultrafiltration and diafiltration, nanofiltration, membrane pervaporation, and membrane distillation.

**Solid-liquid Separations:** Conventional filtration and solid-liquid extraction.

**Hybrid/Integrated Reaction-Separation Systems:** Membrane bioreactors, extractive fermentation, reactive distillation and reactive absorption.

For each of these processes, the fundamental principles and design aspects are presented, followed by a detailed discussion and specific examples of applications in biorefineries. Each chapter also considers the market needs, industrial challenges, future opportunities, and economic importance of the separation and purification methods. The book concludes with a series of detailed case studies including cellulosic bioethanol production, extraction of algae oil from microalgae, and production of biopolymers.

*Separation and Purification Technologies in Biorefineries* is an essential resource for scientists and engineers, as well as researchers and academics working in the broader conventional and emerging bio-based products industry, including biomaterials, biochemicals, biofuels and bioenergy.

## Users Review

### From reader reviews:

#### Margaret Holt:

Have you spare time for just a day? What do you do when you have far more or little spare time? That's why, you can choose the suitable activity regarding spend your time. Any person spent their particular spare time to take a go walking, shopping, or went to often the Mall. How about open or read a book allowed Separation and Purification Technologies in Biorefineries? Maybe it is to be best activity for you. You already know beside you can spend your time together with your favorite's book, you can more intelligent than before. Do you agree with their opinion or you have other opinion?

#### James Pickett:

The feeling that you get from Separation and Purification Technologies in Biorefineries may be the more deep you rooting the information that hide in the words the more you get thinking about reading it. It doesn't mean that this book is hard to recognise but Separation and Purification Technologies in Biorefineries giving you joy feeling of reading. The author conveys their point in a number of way that can be understood simply by anyone who read the item because the author of this e-book is well-known enough. This specific book also makes your current vocabulary increase well. Therefore it is easy to understand then can go with you, both in printed or e-book style are available. We recommend you for having this kind of Separation and Purification Technologies in Biorefineries instantly.

#### Linda Bryant:

Information is provisions for individuals to get better life, information presently can get by anyone on everywhere. The information can be a understanding or any news even a huge concern. What people must be consider if those information which is within the former life are hard to be find than now is taking seriously which one works to believe or which one the resource are convinced. If you get the unstable resource then you buy it as your main information you will see huge disadvantage for you. All of those possibilities will not happen in you if you take Separation and Purification Technologies in Biorefineries as your daily resource information.

#### Carolyn Berndt:

Do you have something that you want such as book? The publication lovers usually prefer to decide on book like comic, brief story and the biggest an example may be novel. Now, why not hoping Separation and Purification Technologies in Biorefineries that give your enjoyment preference will be satisfied by simply reading this book. Reading routine all over the world can be said as the opportunity for people to know world better then how they react when it comes to the world. It can't be stated constantly that reading addiction only for the geeky individual but for all of you who wants to always be success person. So , for all you who want to start reading through as your good habit, you can pick Separation and Purification Technologies in

Biorefineries become your current starter.
