The Local Langlands Conjecture for GL(2) (Grundlehren der mathematischen Wissenschaften) By Colin J. Bushnell, Guy Henniart

The Local Langlands Conjecture for GL(2) contributes an unprecedented text to the so-called Langlands theory. It is an ambitious research program of already 40 years and gives a complete and self-contained proof of the Langlands conjecture in the case $n=2$. It is aimed at graduate students and at researchers in related fields. It presupposes no special knowledge beyond the beginnings of the representation theory of finite groups and the structure theory of local fields.

Editorial Review

Review

From the reviews:

"In this book the authors present a complete proof of the Langlands conjecture for $GL(2)$ over a non-archimedean local field, which uses local methods and is accessible to students. ... The book is very well written and easy to read." (J. G. M. Mars, Zentralblatt MATH, Vol. 1100 (2), 2007)

"The book under review gives a complete and self-contained insight into the theory of representations of G We highly recommend this book to Ph.D. students as well as to specialists. The book contains a huge amount of information, definition and facts The book has a Bibliography containing 91 references" (Alexandru Ioan Badulescu, Mathematical Reviews, Issue 2007 m)

"The aim of this monograph is to present a complete and self-contained proof of the Langlands conjecture for $GL(2)$ over a non-archimedean local field. ... This volume presents a large amount of difficult material in a clear and readable manner. It can be recommended to anyone interested in representations of linear algebraic groups." (Ch. Baxa, Monatshefte für Mathematik, Vol. 154 (4), August, 2008)

From the Back Cover

If F is a non-Archimedean local field, local class field theory can be viewed as giving a canonical bijection between the characters of the multiplicative group $GL(1, F)$ of F and the characters of the Weil group of F . If n is a positive integer, the n -dimensional analogue of a character of the multiplicative group of F is an irreducible smooth representation of the general linear group $GL(n, F)$. The local Langlands Conjecture for $GL(n)$ postulates the existence of a canonical bijection between such objects and n -dimensional representations of the Weil group, generalizing class field theory.

This conjecture has now been proved for all F and n , but the arguments are long and rely on many deep ideas and techniques. This book gives a complete and self-contained proof of the Langlands conjecture in the case $n=2$. It is aimed at graduate students and at researchers in related fields. It presupposes no special knowledge beyond the beginnings of the representation theory of finite groups and the structure theory of local fields. It uses only local methods, with no appeal to harmonic analysis on adele groups.

Users Review

From reader reviews:

Gary Bloomfield:

Have you spare time for a day? What do you do when you have considerably more or little spare time? Yes, you can choose the suitable activity with regard to spend your time. Any person spent their spare time to take a walk, shopping, or went to often the Mall. How about open or even read a book called The Local Langlands Conjecture for $GL(2)$ (Grundlehren der mathematischen Wissenschaften)? Maybe it is being best

activity for you. You understand beside you can spend your time along with your favorite's book, you can more intelligent than before. Do you agree with their opinion or you have various other opinion?

Jessica Keith:

As people who live in often the modest era should be revise about what going on or info even knowledge to make these people keep up with the era and that is always change and move forward. Some of you maybe will probably update themselves by examining books. It is a good choice for you personally but the problems coming to a person is you don't know what one you should start with. This The Local Langlands Conjecture for GL(2) (Grundlehren der mathematischen Wissenschaften) is our recommendation to make you keep up with the world. Why, because book serves what you want and want in this era.

James Williams:

Reading a guide can be one of a lot of pastime that everyone in the world likes. Do you like reading book so. There are a lot of reasons why people like it. First reading a publication will give you a lot of new facts. When you read a reserve you will get new information since book is one of numerous ways to share the information or perhaps their idea. Second, reading a book will make an individual more imaginative. When you reading a book especially hype book the author will bring you to definitely imagine the story how the characters do it anything. Third, you can share your knowledge to some others. When you read this The Local Langlands Conjecture for GL(2) (Grundlehren der mathematischen Wissenschaften), you could tells your family, friends along with soon about yours reserve. Your knowledge can inspire the others, make them reading a book.

Dominick Tran:

A lot of people always spent their very own free time to vacation as well as go to the outside with them friends and family or their friend. Are you aware? Many a lot of people spent these people free time just watching TV, or maybe playing video games all day long. If you want to try to find a new activity here is look different you can read a book. It is really fun for yourself. If you enjoy the book which you read you can spent all day every day to reading a reserve. The book The Local Langlands Conjecture for GL(2) (Grundlehren der mathematischen Wissenschaften) it doesn't matter what good to read. There are a lot of people who recommended this book. These people were enjoying reading this book. In the event you did not have enough space to create this book you can buy the e-book. You can m0ore very easily to read this book from your smart phone. The price is not too costly but this book offers high quality.
