**Weather, Climate and Climate Change: Human Perspectives** By Greg O'Hare, John Sweeney, Rob Wilby

A timely and accessible analysis of one of the most crucial and contentious issues facing the world today – the processes and consequences of natural and human induced changes in the structure and function of the climate system.

Integrating the latest scientific developments throughout, the text centres on climate change control, addressing how weather and climate impact on environment and society.

## **Editorial Review**

### **Review**

This is a very good text. It has two main aspects strongly in its favour. firstly, the production and layout are inviting. There are numerous diagrams and illustrations (and two excellent full-colour plate sections), text boxes going into more detail on topics and providing case studies, sets of key ideas to provide an overview and the usual references, questions and web section at the end. Secondly, the topics have been re-arranged in such a way as to better prepare the novice which added considerably to the book's readability. Experts might want to look at quite restricted areas but beginners tend to think in broad terms and simple questions. By having the first portion look at broad concepts and the second to look at regional and local detail, the authors have been able to separate and clarify matters that other texts have, in the past, failed to do. For these reasons this should be seen as an excellent introduction to the topic and deserves a wide readership.

**Dr Paul S Ganderton, the Teaching Ecology Group's Book Review Editor.**

"This new perspective by Greg O'Hare and his colleagues is far from tedious and will be valuable for undergraduates seeking a comprehensive, modern, well presented and interesting treatment of atmospheric science in a form that displays human relevance.

"The virtue of this book is that it provides in one package a good background on atmospheric processes, regional climates, climate change and human implications."

"This attractive volume provides a fine entree to modern climatology, and it should stimulate students to delve further into this increasingly vibrant area."

**Andrew Goudie - Master of St Cross College, Oxford**

**Times Higher Education Supplement May 27 2005 p. XXII**

From the Back Cover

Weather, Climate and Climate Change: Human Perspectives

provides an up-to-date and accessible analysis of one of the most crucial and contentious issues facing the world today - the processes and consequences of natural and human-induced changes in the structure and function of the climate system. The theory of, and evidence for, climate change forms a central role in the text along with how weather and climate impacts on environment and society. Examining the issues as a continuum, the authors present an argument that is both highly topical and contextualised for students and academics alike.

Features include:

- An introductory examination of the major components of the climate system including coverage of the

impact of mass and energy on wind motion, atmosphere/ocean interactions, synoptic weather systems, local and urban climates, air pollution episodes, ice cores and ice ages, global warming and climate extremes including drought, storm and flood.

- A detailed analysis of how future weather and climates can be modelled.
- An investigation of climate and climate change within a regional framework and through the examination of the climate of high, middle and low latitudes.
- Case studies which illustrate and synthesise the main themes within the text.
- A chapter on *‘Climate-human adjustment’* which draws on case studies from both the developed and the developing world to explore critical issues such as the varying adaptive capacity, vulnerability and risk of regions and societies to extreme weather events.
- Latest scientific developments which are integrated in context throughout the text.

Weather, Climate and Climate Change will be essential reading to students, academics and professionals in the fields of climate, meteorology and global climate change and of broader interest to those in physical geography and environmental studies/science in general.

Greg O’Hare is Professor of Geography at the University of Derby.

John Sweeney is Senior Lecturer in Geography at National University of Ireland, Maynooth, Ireland.

Rob Wilby is the Climate Change Science Manager at the Environment Agency, having taken leave of absence from the Department of Geography, King’s College London.

## Users Review

### From reader reviews:

#### **Bettina Cutler:**

With other case, little persons like to read book Weather, Climate and Climate Change: Human Perspectives. You can choose the best book if you like reading a book. Providing we know about how is important a book Weather, Climate and Climate Change: Human Perspectives. You can add know-how and of course you can around the world by a book. Absolutely right, because from book you can know everything! From your country until finally foreign or abroad you will end up known. About simple point until wonderful thing you may know that. In this era, you can open a book or even searching by internet unit. It is called e-book. You can utilize it when you feel bored to go to the library. Let’s learn.

#### **Cornell Smith:**

This book untitled Weather, Climate and Climate Change: Human Perspectives to be one of several books in which best seller in this year, that’s because when you read this book you can get a lot of benefit into it. You will easily to buy this book in the book retail store or you can order it by using online. The publisher on this book sells the e-book too. It makes you easier to read this book, since you can read this book in your Smart

phone. So there is no reason to you personally to pass this book from your list.

**Robert Burke:**

Can you one of the book lovers? If so, do you ever feel doubt if you are in the book store? Aim to pick one book that you never know the inside because don't judge book by its handle may doesn't work is difficult job because you are scared that the inside maybe not seeing that fantastic as in the outside seem likes. Maybe you answer can be Weather, Climate and Climate Change: Human Perspectives why because the fantastic cover that make you consider concerning the content will not disappoint anyone. The inside or content is actually fantastic as the outside as well as cover. Your reading sixth sense will directly assist you to pick up this book.

**Keely Charles:**

Do you like reading a book? Confuse to looking for your preferred book? Or your book ended up being rare? Why so many issue for the book? But almost any people feel that they enjoy regarding reading. Some people likes reading, not only science book and also novel and Weather, Climate and Climate Change: Human Perspectives as well as others sources were given expertise for you. After you know how the great a book, you feel want to read more and more. Science e-book was created for teacher or even students especially. Those guides are helping them to include their knowledge. In various other case, beside science reserve, any other book likes Weather, Climate and Climate Change: Human Perspectives to make your spare time much more colorful. Many types of book like here.
