The Greenland Entomofauna: An Identification Manual of Insects, Spiders and Their Allies (Fauna Entomologica Scandinavica) From Brill

In *The Greenland Entomofauna* an international team of 64 taxonomic specialists provide for the first time a richly illustrated guide to the identification of the 1200 species of Hexapods/Insects, Arachnids and Myriapods so far known to occur in the country. While the composition, origin and adaptations of the Greenland fauna has always been a challenge to biogeographers and ecologists/ecophysiologists, the provision of a tool for detailed identification of its constituent species is now particularly timely, since global climate change will expectedly have a particularly noticeable impact on biota at high latitudes. This obviously renders the feasibility of monitoring distributional range shifts of the principal components of this biota a matter of some urgency. Contributors are: Achterberg, Cornelius van; Ahola, Matti; Bartak, Miroslav; Behan-Pelletier, Valerie; Bird, Jeremy M.; Bog, Katrine; Brodo, Fenja; Buhl, Peter N.; Dahl, Christine; Disney, R.
