This major book gives a comprehensive review of the epidemiology, science and clinical management of gestation diabetes.

Fully updated and revised, it contains new chapters on:

- Fetal growth in normal and diabetic pregnancies
- Genetics
- Congenital anomalies
- Exercise
- Pharmacological management
- Insulin pump therapy
- Hypoglycemia
- The role of ultrasound for timing of delivery

The book provides a comprehensive, authoritative, international view of these difficult pregnancies and will be invaluable to maternal-fetal medicine specialists, diabetologists, neonatologists, and basic scientists working in the field.
